TemplateMonster is a premium Template Club, with all new amazing Premium 11 HTML5 & CSS3 templates every day!Q: Displaying data with a binary mode in mysql How do i display data from mysql database into a variable? I have a binary data type stored in one of the field(LTA_STORAGE_TYPE) which is in integer format \$q = "SELECT LTA_STORAGE_TYPE FROM TA_STORAGE_TYPE WHERE ID = ".\$_GET['id']." AND DATE = '".date("Y-m-d")."'"; \$result = mysql_query(\$q) or die(mysql_error()); \$row = mysql_fetch_array(\$result); if (mysql_num_rows(\$result) > 0) { while(\$row = mysql_fetch_array(\$result)) { echo "".\$row['LTA_STORAGE_TYPE'].""; } } The above query selects the value stored in LTA_STORAGE_TYPE and displays it in a selectbox, The problem is, if the data in LTA_STORAGE_TYPE is 0, it displays 0 in the selectbox, even though I need to display 0. If I change the code to: \$q = "SELECT LTA_STORAGE_TYPE FROM TA_STORAGE_TYPE WHERE ID = ".\$_GET['id']." AND DATE = '".date("Y-m-d")."'"; \$result = mysql_query(\$q) or die(mysql_error()); \$row = mysql_fetch_array(\$result); if (mysql_num_rows(\$result) > 0) { while(\$row = mysql_fetch_

What's New in the CloudBerry Explorer For Amazon S3?

CloudBerry Explorer for Amazon S3 is a simple and reliable tool that enables you to manage your private files and documents in Amazon S3 storage. It helps you to organize all your personal data on cloud just as you would do on your own local computer. This is achieved with a streamlined and user-friendly interface which allows you to open as many transfer instances as you want. Being divided into two panels, one for specifying the source directory and one for setting up the cloud account where all your personal files will be uploaded to, you can easily manage and track all your transferred documents. Since it comes with drag and drop functionality, you can easily drag your files from your computer to the S3 account or vice versa. Thanks to its multi-tabbed view, the application enables you to keep track of different accounts (such as Amazon S3, LeoNovus, Walrus, Dunkel, Connectria, GreenCloud and Cloudian, to name a few) and your local machine. Intuitive AWS import and export wizards Moreover, CloudBerry Explorer for Amazon S3 provides you with handy wizards that will guide you through the necessary steps of loading or exporting data into or from AWS cloud (also referred to as Amazon Web Services). After selecting the proper account and specifying the right Amazon bucket, the application enables you to save signature files to your storage device, as well as pack and ship your device. Additionally, you are able to create a new CloudFront distribution wizard by selecting the registered Amazon S3 account from the drop-down list. Also abbreviated as CDN, Amazon CloudFront is a content delivery network that serve content to end-users with high performance.
