From this application, you will be able to view Real Media files through your preferred video player (i.e. Real Player). Peer-to-Peer (P2P) is a protocol that provides both real-time and asynchronous communication between users of peer-to-peer applications. One of the earliest peer-to-peer application is BitTorrent. BitTorrent (commonly referred to as BT) is a software application that facilitates P2P file sharing. While many users are familiar with file sharing programs like Limewire and Gnutella, these programs do not handle the various complexities of the larger BitTorrent network. Git is a version control system, designed to allow developers to work efficiently and to collaborate with others. Git is a fast, scalable, distributed version control system for code. Its speed and scalability are achieved through intelligent techniques for reducing redundant work, combining related changes into single transactions, and transmitting only changes to other users that have the most up-to-date version of the file. Git works with many operating systems and environments, including Microsoft Windows, POSIX-based operating systems, and Unix-like operating systems. Git is free software distributed under the terms of the GNU General Public License. A huge problem I was faced with was that my computer couldn't boot from a blank DVD (it just didn't burn anything). However, using a generic DVD for DVD burning software wouldn't work, but luckily, i found this project on codeproject. The project is called DVD-RW Color correction toolkit and it offers a wide range of functions for people who need to manipulate DVD-RW disks to obtain the highest quality data possible. Davian is a cross-platform e-mail server. It supports both IMAP and POP3 protocols, it allows to send and receive e-mails, the e-mail account can have multiple email accounts, multiple users can use a single account and it's possible to define custom rules on account setup. MultiFile has been developed to allow the development of simple applications that uses the great power of the common Internet to communicate and synchronize the data. In short, the concept is that you can think of the application as a many file directory where you can create, edit, read and delete your files. The application will manage these files transparently. It can be difficult to capture a high-quality video, but it's easier than you think. The example is the Linux desktop with the minimal configuration. This configuration is suitable for recording the desktop in resolution 640x480 on a 1080p TV. It requires the x11-record and x11-grab packages. Steps: 1. Connect the Camcorder to the PC with the appropriate cable. 2. Run the x11-record script on the PC. 3. Open the Camcorder and press the record button. If you want to record the desktop from another TV or have other requirements, you can adapt the settings in the script. The Camcorder Once the video is captured, we need a way to watch it. It is possible to use the X11grab program. Tested using the X11grab, it works very well. You can obtain the Camcorder from To save the video, you need to run a program called acidgrab. You can also use the program BtR to record the desktop. If you want to save the video, you need the x11-record program. Steps: 1. Open the x11-record
