EasyEclipse for C and C++ is a full Eclipse environment for new and experienced C and C++ developers. Download the package (2.1 MB) and unzip it in a convenient folder. · Add the following as a launch configuration: -Command: eclipse -Working dir: \$path\easyeclipse-installation-folder\eclipse.exe Now you can use Eclipse right away! · In your first run, you'll be asked to restart. After restart, you'll have the new Eclipse-installation in the "Startup" folder. · In this folder, go to "bin" and find the "eclipse.exe" file. Double click to start Eclipse. · Follow the instructions. Eclipse has 2 start modes: 1) Create a Workspace with default project files 2) Load an existing workspace If you choose the second option, make sure you have all your C or C++ files in your workspace. Or else, you'll get an error telling you that you need to create a new project. In the "Help->Create C++ or C Project" dialog, select to create a new project and select: -Working dir: \$path\easyeclipse-installation-folder\eclipse.exe (where \$path is the location of the "bin" folder in your Eclipse installation folder) · (optional) In "New Project...", select "Dynamic Project", then: -Working dir: \$path\easyeclipse-installation-folder\eclipse.exe -Project Name: EasyEclipse -Location: "C:\easyeclipse-installation-folder\eclipse.exe" -Package Name: com.nix.easyeclipse.eclipse. At this point, you will be asked to create the workspace. Just press the "Finish" button. Important: All C/C++ projects created by Eclipse use Eclipse "Workspaces". A workspace is a collection of related projects. We strongly recommend that you create a workspace for each project. The best way to create a workspace is to select "Dynamic Project" from the list of project types. This will create a workspace for you, all you have to do is to import it. If you want to create a new project, just select "C/C++ Project" from the list of project types. After the workspace is created, you'll be asked to

What's New in the EasyEclipse For C And C ?

EasyEclipse for C and C++ is a Linux package containing the Eclipse Java and Eclipse Platform as well as a set of tools for C and C++ development. There is no Java for Windows component included in the package as the JRE is already available from the GNU and Open Source Software (GPL) repositories. The Eclipse Platform allows you to create, compile and debug C and C++ applications. The C and C++ editors are formatted according to the GNU standards (in particular preferable to K&R), and the Eclipse C/C++ Development Tool is used to create and compile/debug such code. You need to install eclipse-SDK_C-C++, eclipse-SDK_C-Cpp, eclipse-SDK_C-Cpp-Plus and eclipse-SDK_C-Cpp-Examples. #1. To install the Eclipse Platform (Linux) To install the Eclipse Platform (Linux), use the following command on your terminal: #1.1. Linux Eclipse Platform Package #1.1.1.
