Samba shares. Linux and Windows NAS Shares. ZFS-Filer. References Category:Data synchronization Category:Virtualization software Category:Free backup softwareQ: Cannot retrieve list items in SharePoint 2010 I have a list in sharepoint 2010. I am using Sharepoint web part to show the list items. The problem is that it only shows "System Account" (no other list items) I have removed the permission of all the users to the list in sharepoint 2010. Is there anything else that needs to be done? A: I had a similar problem with SharePoint 2010. Basically, this had to be done: Go to the list in SharePoint 2010, and click on the Permissions Tab. Under the "Permissions for this site," you will see an "Administrators" group. This group was created in order to prevent normal users from accessing the list. You will want to remove it, and then add your own users to the list. If you need any additional assistance, let me know. Q: Python logging module not working as expected I have been using a logging module that works well. But for some reason my project isn't writing to the file correctly. This is the code I am using: import logging def main(): logging.basicConfig(filename='sample.log') def log_write(log_msg): log_file =
