#### ICafe Manager

iCafe Manager For Windows 10 Crack is a full-featured cyber cafe management utility, providing tools designed to assist you in conducting daily administrative and monitoring tasks. Nowadays, the Internet becomes more and more wide spread and the number of public Internet cafes is continuously decreasing. This type of applications are still used in the remaining facilities for managing the entire business, from client service and network management to accounting. iCafe Manager Crack For Windows is a client-server application that can be used for connecting all the terminals in a cyber cafe and run management operations from a centralized platform. It bundles modules that work together to help you perform all the tasks. It can keep an eye on the bandwidth usage, manage clients and their sessions, rate plans and membership subscriptions, generate receipts and the list of functions does not end here. The application provides support for multiple users, which means that each employee can create a new account and login when their shift starts. It can be used for creating a client database and customizing rate plans to meet the requirements of different customer categories. All the terminals can be controlled from the PC where the server side is installed. With just a few clicks, workstations can be re-connected, shutdown or restarted and certain websites can be restricted to the users. Furthermore, it comes with a set of options designed to keep your computers safe. For instance, you can make the registry editor and the control Panel unavailable, clean temporary files on exit, disable the computer lock option or prevent users from changing the Windows password. All sorts of detailed reports can be generated, starting with daily cash registers, the member history and the user lists and ending with terminal usage or inventory. While its practicality is decreasing along with the number of cyber cafes, iCafe Manager can prove to be a great management tool for the surviving businesses. It is a convenient way to automatize certain administrative tasks that are tedious and time-consuming. Features: \* Start the servers and clients \* Customize the rates per categories (Cash in cash out, Network internet, Black Internet, Socks service, Message service, Password management, Spyware, Protections, Firewall, Websites and many others) \* Setup the username and password \* Perform and track the management of the activities on the web \* Create reports \* Option to run as a service or interact with the user \* Analyze the web logs \* Option to convert the catalog to human readable files \* Register a company name in the registry \* IPer

#### ICafe Manager Crack With Key

KEYMACRO is a program used to create a password for a selected user/machine. It automatically generates a random passwd that is of sufficient length (8 characters). It can be used to save typing tedious steps such as double and triple typing passwords. It will not allow to enter the same password in 2 or more times. CONFIGURE USER: You can configure the list of the users in the program. In the list, you will have a name and a password, where the latter you will have to type. You will also be able to change the properties of the accounts (ie. to make it a administrator or restrict access). DESTROY KEY: When you have finished typing the password, you will be given the opportunity to press the destroy button. This will remove the key from the list and make the program inaccessible. LIFE CYCLE: The program will be executed several times, for every new type of event that happens. So, you will have the choice between the "create key" and the "destroy key" on the third launch. WIDGET: The program will have the possibility to install a "Widget" (ie. a button) that will be displayed on the application. You will be able to make this button accessible from the desktop of the user, by dragging it. The title of this button will be displayed on the top bar of the program. Awards: The program has been rated "Excellent" by two well known sites. The Firewall Manager is an application to enable and configure a firewall policy on a Windows computer. It supports all versions of Windows from 2000 to Windows 7 and Windows Server 2008. With this tool you can define several firewalls as a set of rules that you can configure according to your need, managing the inbound and outbound traffic in a dynamic and easy way. Key Features - Set up, manage and configure different firewalls. - Virtual machine support. - Remote administration through Firewall Manager API. - Save the rules to use it in other computers. What's New - Added an integrated firewall dashboard. - Added a firewall dashboard user interface. - Now you can manage more than 4 different firewalls. There are a lot of tools to manage remote computers, but until now, there was no complete and easy- 2edc1e01e8
