Cracking Adobe Photoshop is easy, but it requires some more work. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

I was in the process of making my first big Lightroom catalog tour when I came across a quirk I hadn't noticed before. I checked out the back side of one of my photos in Lightroom and saw that I had missed a column of "History" settings. Huh? I don't remember adding any new photos or changing anything in the "History" column, so I was a bit perplexed. I checked my other catalogs and then came to the conclusion that I must have accidentally deleted a setting so that Lightroom was misleading me. How could that have happened? I could restore the setting, but when I did, it would not go back to my previous setting. Instead, it would look back to the default setting of "None". I found a fix very easily, but it would be nice if the reset to the default setting worked correctly, as it did in earlier versions of Lightroom. I also found that my camera's top thumb button depressed the function keys on my keyboard quickly, making it harder to navigate the menus. I would have liked to have had the focus on the D-Pad without that little pop. Also, while looking through my digital gear to find out about remote controls, I thought I may have found a solution to taking my many Canon lenses (and system) off my camera belt and putting them in car ports when needed. This is a good idea, but I needed to figure out how to wirelessly and easily connect a particular pair of lenses to my new Canon 5D camera. The Wi-Fi dongle seems to be a bit of an afterthought, and I couldn't get it to work properly, even though I had the necessary dongle and receiver in hand. I would like to see more thought put into the wireless functions of Lightroom, so I can enjoy using the software and avoid having to make the trip to the computer lab for the wireless stuff. Or, maybe I'm not the prime candidate for that yet.
